

Selecting a Color Label Printer

Both Inkjet and Laser printers can give excellent results. One needs to weigh several factors when making a choice between these two types of printers.

****First, choose a printer that is right sized for your amount of printing.**

****Second, please make sure the paper weight of the label matches the weight the printer supports.**

****Label weights listed below.**

The potential volume of label printing should be considered when choosing a printer.

Total Labels Printed Per Week	Less than 200	Less than 1000	Less than 5000	Less than 10000	10000 or more
Printer Recommendation	Inkjet/Laser	Inkjet/Laser	Laser	Laser	Laser

A laser printer could be used in any circumstance, but inkjet printers are generally rated for personal, or business applications as noted in the above table (B).

Inkjet Printers:

- Look for a printer with separate ink cartridges (black, cyan, magenta, and yellow). Avoid printers that only use two cartridges, a black and tri-color.

Laser Printers:

- Look for a printer that uses toner (powder) based cartridges; avoid solid-ink type printers.
- Choose a printer that has a PostScript or Universal PostScript driver available. This type of driver should be used when printing labels. In most cases the normal driver will also work. The PostScript driver will resolve font issues if encountered.
- Ensure the printer has a paper-type setting of "Labels", these settings allow the label sheet to feed smoother and greater time through the fusing process. Setting Paper type to "Labels", will also assist with smearing or lack of color to colorbars.

****Please verify what label weight your printer is meant to use by comparing your printer specifications to the label specifications below.**

LABEL SPECIFICATIONS

Item/label stock	Item Description	Labels per sheet	Paper WT	Material Description
6380-00-CLCOM	TQ LABEL LASER 4X4 2LBL SET	4x4	50 #	50# SUPER BRIGHT LASER JET 8-1/2" X 10,0
